

BL421 Bag Loader

Bags can be filled much faster if the bag is ready, open and waiting for products to be shoved in.

The BL421 helps by feeding taped bags (held in position on two narrow adhesive tapes) and opening them with a jet of air.

- Bags are automatically advanced and placed in front of the air jet.
- Bags removed easily from tape
- Will accommodate tolerances from bag converting
- 2 separate motors ensure parallel advance to enable smooth process without interruptions
- Compact ergonomic design for stress-free upright operation

Technical data

BL421

| | | |
|--------------------|------------------|------------|
| Working height | 950 +/- 50 | mm |
| Cycle rate ca. | 40 | packs/min. |
| Bag size min. | 100 x 100 | mm |
| Bag size max. | 400 x 600 | mm |
| Weight | 53 | kg |
| Outside dimensions | 950 x 500 x 1070 | mm |
